

Aware of your personal information

The internet may not be as safe as you imagine. Any person could potentially become the next victim. Here are some tips for high school students to browse the internet securely

Why care about cybersecurity ?

As a high school student, the use of the internet for various purposes is far more common than ever before, including education, entertainment and socialisation. Since the internet has become such an important part of your life, you should know how to diminish the chance of letting malicious actor destroy your life.

What to do ?

Becareful/Beware of things you post

A Malicious actor can use the photos that you posted to do a cross-referencing to identify your identity. (De-anonymization)

Think before click

We humans, are one of the many vulnerabilities that can be exploited. Don't click or download unknown links or files. (Phishing attacks)

Keep software up to date

When a software has an update, many of them mean there are patches to fix potential vulnerabilities that have been discovered. Keeping software up to date helps reduce the chance of vulnerability being exploit.
